

Janison Academy.

Release Notes

2208

Build number: 2.1.2208.2

Enhancements

Title

CLS-13264

Problem

User enrolment rules are not triggered on every mode of user creation

Solution

User Enrolment Rules that are set to trigger "On user creation" now trigger when a user is manually created, i.e. when an admin uses the "Add User" screen.

This joins self-registration and SSO logins as covered cases, only import from spreadsheet remains to be included as there are performance implications on large imports we need to consider.

Roadmap updates

Release numbering change

Janison have internally changed the numbering format of their sprints, and Releases will have their numbering changed to match this. This change will start with the next release.

New Sprints have been numbered in the following way:

FY[financial year the sprint will finish in]**Q**[quarter the sprint will finish in]**S**[number of the sprint in that quarter] eg: FY22Q4S2. The decision to number sprints based on when they finish is because that is when the outcomes of that sprint will be delivered.

In addition, the build number will be included in the release notes title page to aid in documentation.
