FY23Q2S1

Build number: 2.1.2316.1

Bug Fixes

Title

CLS-13236

Problem

Issues arose of data in options other than the one selected in the Catalogue Item Expiry period were being used, and caused Catalogue Items to expire at incorrect dates.

Fix

The options page has new validation to prevent the saving of data for non-selected options in the Expiry field. Existing Catalogue items with incorrect data will need to be updated. In addition fields were updated to make selection of a Null option easier.

Title

CLS-13323

Problem

Some templates that use the [**Session.SessionDetailsLink**] token were not correctly replacing the token with the link.

Fix

This has been rectified for those templates that the token was intended to be used in, such as the Session Cancelled and Session Update templates. The Token is now correctly replaced with the session link for these templates.
