# Bug Fixes

## **Session Update - the session gets completed after moving the last attendee to "Session Waiting List"**

CLS-13497 | 86580

### **Problem**

A client has raised this issue when they try to do a session update via API, the session gets completed after the last attendee is moved to session waiting list.

With our further investigation, this also happens when updating via import with the "Attendance Status" as "Waitlisted."

While session updates made via API and import gets completed, moving the last attendee to session waiting list via gui keeps the session Published.

### **Fix**

A bug where a session would be marked as Completed if all attendees were moved to the waiting list was resolved. Now Sessions will remain open until all attendees are moved to one of the completed statuses, i.e. Attended or Did Not Attend. The Waitlist status was not correctly being checked as a non-complete status for all code paths.
