Release Notes

FY24Q1S1

Build number: 2.1.2411.3

Bug Fixes

Tokens used for System-FirstLogon and System-PasswordReset generates invalid links

CLS-13543 | 91031,91160

Problem

A client is reporting a behavior that the Activate Account link for their Welcome Emails is broken/invalid. The email uses the System-FirstLogon local message template.

Fix

Fixed a bug where a re-direct to a Social Learning page after resetting a password was expecting the user to already be logged in. This was breaking the whole reset password flow, so the user was never able to set a new password and log in.
