## Bug fixes

### Performance improvement: scheduled task for Nudges

CLS-13686 | 111011

#### Problem

A client reported that their Nudge jobs are getting stuck.

#### Fix

This was due to the new Consequent Nudge timing out on CIs with large enrolment lists, and thus affecting other nudges as well. Further indexing and updates to improve performance of the Consequent Enrolment nudges when scheduled for CIs with a large number of historical enrolments have been added.

### Statement of Attainment (SoA) - Only displays 1 of the competencies

CLS-13644 | 109585

#### Problem

Upon Completion of the Catalogue Item, Statement of Attainment (SoA) only shows 1 competency instead of all linked competencies. Learners with "Completed" enrollment status will have SoA pdf with duplicated competencies listed instead of the actual list of competencies.

#### Fix

The query for Competencies shown in merge fields for a Statement of Attainment template was returning duplicates. Investigation showed that all Competencies were returned, but some were duplicated, and so were shown several times and thus pushed later competencies off the template merge list. Now Competencies are correctly checked to ensure only unique items are passed to the template merge list.

Please note that if a competency is actually awarded to the same user twice, it will still show twice on this template, as each time it is awarded is considered unique by the system.
