FY25Q2S1

Build number 2.4.2521.8

Bug fixes

My Learning Expiry Date Discrepancy - Tile vs Grid View

Internal #: CLS-13811 | Helpdesk #:121945

Problem

A client identified a discrepancy in the expiry dates displayed between the Tile view and the Grid view in the My Learning section. If you check "My Learning" in Tile view, the expiry date is configured correctly. However, if you change the view to "View as Grid," it displays an earlier expiration date, which is incorrect.

Fix

Grid View of My Learning was not correctly translating the "Completed" date from UTC, which could lead to it showing the wrong date. It now correctly converts to local instance time.

LTI Asset - Status is not returning as Complete

Internal #: CLS-13849 | Helpdesk #: 126279

Problem

When a user/learner launches and completes some LTI Assets, instead of returning a status "Completed," the status remains in "Incomplete."

Fix

LTI assets were not correctly being recorded as Complete in Academy. This was due to a change in API endpoint security refusing http calls. This has been adjusted to allow http and https instead of https only.

Message Templates - System throws Elmah log errors when non-mandatory fields Subject and Text are left blank

Internal #: CLS-13534 | Helpdesk #: 90901

Problem

If a user was to leave non-mandatory Subject and Text (message body) fields blank on a custom status local message template, the system will throw Elmah log errors and fail to send the email to recipients.

Fix

Custom message templates without a Subject or a Body were causing errors when being sent. The predicted use-cases for emails without a Subject or a Body were deemed small enough to warrant making these fields mandatory when creating a Custom Template.
