

Janison.

Janison Academy

Release notes

FY25Q4S5

Build number 2.4.2545.1

Improvements

Add MFA TOTP Display Name Default Value

Internal #: CLS-13929

Fix

Academy has been updated so that the tenant's name is sent to B2C for MFA. This allows us to set a common-sense name in Authenticator apps, whereas it was previously sending the B2C environment name (e.g. "Janison Prod")

Update OAuth Azure Directory code and libraries to use Microsoft Graph API

Internal #: CLS-13954

Fix

The Azure Active Directory Graph is being deprecated and being replaced by Microsoft Graph. We have now updated our API to use Microsoft Graph. This was only affecting clients who were using Microsoft OAuth SSO.
