

Janison.

Janison Academy

Release notes

2025.08.01

Build number 2.4.2614.3

Bug fixes

Competency Enrolment Report returns no results when filtering by any Group Type

Internal #: CLS-13980 | Helpdesk #:148495

Problem

When using the Competency Enrolment Report within Academy, applying any filter under Group Types, no data is returned. This also triggered a console error.

Fix

We have implemented a fix that allowed the Group Types filter to be used and return appropriate results in the Competency Enrolment Report. Console error has been resolved as well.

Session name output in the Statement of Attainment (SOA)

Internal #: CLS-13736 | Helpdesk #:114616

Problem

An issue was discovered where a catalogue item with the Statement of Attainment certificate option enabled, did not correctly display the session name value when added.

Fix

We have implemented a fix that now correctly shows the session name when using the learning event + add session option.

'Last Updated On' timestamps for Manage Learning Assets page is not following tenant time zone

Internal #: CLS-13755 | Helpdesk #:116600

Problem

A time display issue was discovered in the Manage Learning Assets area of Academy where the 'last updated on' timestamp was not following the tenant time zone settings.

Fix

We have implemented a fix that correctly applies the tenant time zone to the 'Last updated on' timestamp which will remove any further confusion.

B2C Login Page - Register button not showing when self-registration is enabled

Internal #: CLS-13988

Problem

With the new B2C login page integration, we noticed the Register link is not available even when self-registration is enabled.

Fix

We have implemented a fix that now correctly considers the self-registration setting and will now display a Register button on the B2C login page as expected.

Improvements

sync Strings Resources with B2C login screen

Internal #: CLS-13971

Problem

Some clients have customised string resources for their login screens and with the introduction of the B2C login page, these customised strings were not considered and did not sync over.

Fix

We have implemented a fix that syncs over any existing Academy login strings to the B2C login page and will now correctly display any previously made custom string content.
