Bug fixes

Reporting Hierarchy - Clearing manager's Reports To field removes their manager role to their subordinates

Internal #: CLS-14026 | Helpdesk #:162120

Problem

A bug was discovered around Users and their reporting lines. When clearing a user's "Reports To" field, it incorrectly clears their direct subordinate's "Reports To" field, breaking reporting chains. This has been discovered to be a display issue, and the linkages remain intact in the database.

Fix

We have implemented a fix to correctly display the Users reporting structure and not break other reporting lines that have not been actioned.

Unable to launch enrolled Catalogue Item – Social learning

Internal #: CLS-14038 | Helpdesk #:172288

Problem

An issue was discovered for our clients using Social learning where they could not access Catalogue items from My Learning Transcript and Learn and Collaborate sections of the application. A patch was put in place on the same day and this issue was rectified. We are now implementing the complete fix.

Fix

We have implemented a fix to ensure our Social learning customers can properly access Catalogue items as expected.
