Bug fixes

Reporting - Incorrect Managers in Position-Based User Reports

Internal #: CLS-14050 | Helpdesk #: 175079

Problem

We have fixed an issue where some users displayed an incorrect manager when using the User report. This meant the "manager name" column did not reliably match the configured position hierarchy.

Fix

We corrected the reporting logic so that the Manager Name field now uses the current "reports to position" relationship and active user assigned to the parent position.
