Release notes

Academy Release 2026.09.01

Build: 2.4.2622.1

Release Notes

The Janison Academy Release **2026.09.01** includes bug fixes.

Bug fixes

Disabled users from HR sync now correctly blocked from signing in

Internal #: CLS-13997

Problem

Users removed from the HR import spreadsheet and disabled through the "Sync data from HR system" function were not being disabled in Azure AD B2C, so they could still sign in to Academy with their username and password.

Fix

The HR sync import now correctly disables these users in B2C. Users omitted from the uploaded HR spreadsheet are made inactive in Academy and disabled in B2C so they can no longer sign in, while users included in the spreadsheet remain active as expected.

Organisations, Org Units and Groups selectable again in Access

Restrictions and Announcements

Internal #: CLS-14149 | Helpdesk #: ZD-196896, ZD-201686

Problem

Administrators were unable to search for or select Organisations, Org Units, and Groups when configuring Access Restrictions on Catalogue Items or when adding Recipients to Announcements.

Fix

Organisations, Org Units, and Groups now appear correctly in search results across all affected areas, so administrators can select them again when setting Access Restrictions and Announcement recipients.

Custom styles and skins now regenerate correctly

Internal #: CLS-14171

Problem

Custom Styles & Images (skins) were not regenerating correctly: tenants with custom styles saw a persistent "Styles are out of date" warning that saving did not clear, colour changes did not always apply, and the skin-generation tools reported success without updating the app version.

Fix

Saving a skin on the Settings > Styles & Images page now clears the out-of-date warning, regenerates the skin, and applies colour changes after a refresh, and the global skin-generation tools correctly update the app version for affected tenants.
