Release Notes

Insights Release 2023.12.01

Build: 0.2023.11.4942

Release Notes

The Janison Insights Release **2023.12.01** includes bug fixes and improvements.

Bug fixes

Marking

- An issue was encountered during marking where a Drawing Interaction which has been answered by a student does not appear to the Marker in the relevant Marking Project. A fix was implemented to ensure that all Drawing Interaction item responses are displayed as expected to Markers. This issue is resolved. (7535, 110560)

Improvements

Security & Integrations

- Two new endpoints have been added to the Events API,
    - POST /events.
    - PATCH/events/{eventId}.

    These endpoints provide the ability to create and update/edit events via the API. Defaults can be set and managed via Settings > Test Delivery Settings > API Default Settings. (7443)

- To support the updates to the Events API, further improvements have been made to allow for PNPs to be requested and managed via APIs.

    The new endpoints are,
    - GET /pnps: this will provide a list of current PNP's available in the system.
    - GET /attempt-pnps: this will provide a list of PNP's available on attempts.
    - POST /attempt-pnps: this can be used to apply a specific PNP to an attempt.
    - DEL /attempt-pnps: this can be used to delete a specific PNP from an attempt, where appropriate.

(7444)

Platform

- Following the changes made to the second authorization process from the recent release, additional changes were implemented to update all relevant action buttons to "Ok" and "Cancel" to ensure consistency across the system. (7211, 6202)
