

Janison.

Janison Replay

Release notes

FY24.06.01

Build numbers:

Windows: 5.8.0 MacOS: 5.8.0

Android: 5.8.0 iOS: 5.8.0

Improvements

All Native Apps (Windows, MacOS, iOS, Android)

- Replay now has the capacity to accept a "Launch from URI" link from Janison Insights Candidate Dashboard. If correctly configured in Insights, students on the Candidate Dashboard will have their exams launched in Replay rather than in the browser Test Player 2. The student's test URL and One Time Code will be entered for them, leaving only the session code to be entered when starting the test (if session-based) as per the current process of the Candidate Dashboard.
 - This requires a version of Replay later than 5.8 to already be installed on the user's machine. Automatic installation of Replay will be part of future work.

Bug fixes

Windows

- Added Windows Speech Recognition and Voice Access into prohibited processes.
- Replay is now able to turn off the sticky keys option and its shortcut option when running. Relevant key combinations with sticky keys on should be blocked while running Replay.
