## Release Notes

Insights Release 2025.10.01

Build: 0.2025.9.5818

# Release Notes

The Janison Insights Release **2025.10.01** includes bug fixes and improvements.

## Bug fixes

### Delivery

- We have fixed an issue where automatic enrolment of students via group membership import would only occur when an event was in 'Delivery' status, and not when in 'Draft' status. With this update, automatic enrolment is now triggered regardless of whether the event is in Draft or Delivery. (JIRA: INS-10295)
- We have fixed an issue where the ruler and protractor tools were not displaying in published practice tests, preventing users from accessing these stationary tools during assessments. With this update, the ruler and protractor images now appear correctly in published tests. (JIRA: INS-10426)

## New Features & Improvements

### Delivery

- We have improved the student test submission experience by introducing a new setting that controls whether students can submit their test attempts while offline. With this update, if a student tries to submit a test without an internet connection and the setting is disabled, they will now see a clear message instructing them to check their connection or ask a Test Administrator for assistance. When enabled, offline submissions are allowed and will be reconciled once the device is back online. (JIRA: INS-8730)
- We have improved the end-of-test feedback summary in Insights by implementing support for test attempt feedback in both SQL and NoSQL environments. With this change, candidates and

administrators can now access a breakdown of test components at the end of a test regardless of the underlying database. (JIRA: INS-7398)

- We have increased the character limit for the user-agent field in Insights from 240 to 500 characters across key database tables. This update resolves connection issues for Replay on Android devices. With this change, Replay can now connect to TestPlayer2 without being blocked by user-agent length restrictions. (JIRA: INS-10540)
