API Release Notes

Events API Version 10

Release Notes

Please ensure to update your environments to the newest API version available to use the latest API features.

Platform

- We have improved the Events Core API so time lost and time awarded are recorded for incidents. Previously, these minutes couldn't be stored or retrieved via the Events API. With this update, a new v10 Events Core API exposes optional timeLost and timeAwarded integer fields across all incident endpoints (GET, POST, PUT, PATCH), enabling to capture and integrate time adjustments for more accurate incident reporting. (JIRA: INS-10913)

[Swagger](#)

Please note: Our internal tickets will be displayed as 'JIRA INS-1234', while tickets raised directly to our helpdesk will be displayed as 'HELDESK 123456'.
